

Parallel Generation - Net Energy Billing	Electric
<p><u>EFFECTIVE IN</u> All territory served.</p> <p><u>AVAILABILITY</u> To customer owned, renewable resource electric generation facilities that are interconnected with the company's power supply, rated at 20 kW or less and who have entered into a parallel generation interconnection contract with the company. Renewable resource generators include generating systems which exclusively utilize wind, solar photovoltaic, wood or wood waste, refuse derived fuel, biogas, or hydro-electric generators that must meet the renewable resource definition contained in Wisconsin statute 196.378. If a customer has more than one renewable generator, the renewable generator ratings shall be summed. This sum shall not exceed 20 kW. Exceptions allowing generation size of up to 100 kW will be made for installations made between January 13, 2011 and January 1, 2014. If an application has been submitted to the Company and material financial investments have been made prior to January 1, 2014, or if a Focus on Energy grant has been awarded prior to January 1, 2014, generators up to 100kW will be allowed to take service under this tariff upon review by the Company.</p> <p>Renewable generation equipment must be located on the customer's premise serving only the customer's premise, and must be sized to the customer's expected load requirements. If a customer's generation capacity exceeds expected load at customer location, then the customer will be evaluated for movement to one of the Pg-2 tariffs for their generation output.</p> <p>Customers taking service on the Pg-4 tariff prior to March 31, 2011 and customers with signed applications which were submitted to the Company prior to March 31, 2011 with less than 20kW name plate capacity may continue to be paid for their net monthly excess generation at their full retail rate until December 31, 2021. If a grandfathered customer makes any changes to the size or type of their generation, they will be treated as a new customer.</p> <p><u>MONTHLY RATE</u> Deliveries from the company to the customer shall be billed in accordance with the standard applicable rate schedules of the company.</p> <p>Flow of energy from the customer's renewable generation facilities into the electrical system of the company shall be permitted, with the meter of the company running backward. If the amount of energy supplied to the company exceeds the amount of energy consumed, customer will receive a credit on their monthly bill for the net excess kilowatt-hours of energy received by the company in the applicable month. A customer's excess generation will be credited with a weighted average Pg-2A rate using 45% on-peak Pg 2A \$/kWh rate and 55% off-peak Pg-2A \$/kWh rate. A transmission credit rate of \$0.00831/kWh will also be applied to all excess generation. Customer shall retain all renewable credits and other attributes associated with the energy sold to the Company pursuant to this tariff.</p> <p>Continued to Sheet No. E4.02</p>	

Parallel Generation - Net Energy Billing

Electric

Continued from Sheet No. E4.01

A payment will be made if in a given month the customer has a credit balance of more than \$100.

Minimum Charge

Minimum charges of the customer's applicable rate schedule.

SPECIAL RULES

1. The customer generating facility shall be permanently connected to only those facilities receiving service under rate schedules with similar rate designs.
2. Customers shall not be allowed to switch their generation back and forth between two or more rate schedules to circumvent the intent of rate design.
3. This tariff applies only to the energy generated by the customer's renewable generation facilities. The customer shall retain all renewable credits and other attributes associated with the energy provided to the company pursuant to this tariff.
